

DATASHEET

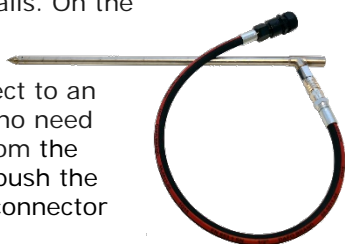

Dafo Powder Nail is developed and designed to enable an effective and safe commence operation at an early stage. As a first response person, using a Powder Nail makes it possible to take a quick action, shock the fire and prevent fire spreading while waiting for the rescue team.

Dry chemical extinguisher combined with the powder nail is suitable for compartment fires, house fires and attics, but also for vehicles and vessels, workshops, etc.

Powder Nail

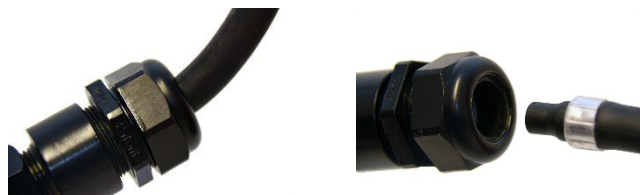

The 700 mm long nail is easily used with a common Fog Nail hammer or drill to get through an outside wall or through the roof.

The nail comes with a hose equipped with a quick connector on one side, to easily switch between attack and restrictor nails. On the other side of the hose, there is a universal coupling used to connect to an extinguisher. There is no need to remove any hose from the fire extinguisher, just push the powder hose into the connector and tighten by hand.

Universal coupling

The coupling fits most powder hoses / dry chemical extinguisher on the market. It is very quick and easy to change between extinguishers, it takes just a few seconds and no tools are needed.

Spray pattern Restrictor

Spray pattern Attack Nail

Technical data

Length	700 mm
Weight	985 gram
Material	Stainless steel

Product	Art no
Powder Nail Restrictor	24-4040-00
Powder Nail Attack	24-4040-01
Powder hose complete with couplings.	24-4040-02
Complete set incl. 1 x Attack, 1 x Restrictor and 1 x Powder hose complete	24-4040-10
Drill, Ø 20 mm, length 600 mm	24-7000-20
Hammer, 2,6 kg	24-4015-02
Holster, 0,7 kg	24-4015-05
