

# A complete and effective fire fighting unit

Saval combination cabinets are widely used in both office buildings and industrial estates. In a combination cabinet, both the extinguisher and the fire hose reel have their own place. This creates the ideal combination of fire protection equipment: a highly effective portable extinguisher for the first attack and a fire hose reel for continued actions with an ongoing supply of water.

## Advantages of Saval surface mounted combination cabinets

- Modern design with no external fittings
- Concealed hinge arrangement
- Door with 2 openings for the benefit of a manual fire alarm
- Separate back panel arrangement
- Optional flush mounting frame
- Sheet steel construction with Zincor and primer finish for optimum corrosion protection during the building process.

## Construction

The Saval surface mounted combination cabinets are manufactured from 1,5 mm

thick zinc-covered sheet steel, ensuring a rugged construction. After the cabinets are welded, they are fitted with a light primer and come standard with RAL9010 (white) structure lacquer. The cabinets can be painted in any colour before or after mounting in place.

A combination cabinet has a large door covering the hose reel and a small door covering the extinguisher. The place of both compartments can be chosen when mounting the cabinet. The magnet catches fitted in the corners of the cabinet hold the doors perfectly in place.

## We know fire. We know safety. We know you.

Since 1925 Saval is a well-known name in fire fighting. Saval is the only company in The Netherlands which produces the high quality range of extinguishers and hose reels itself. Therefore, Saval is always able to comply to the specific needs of their customers. With over 100 service employees in the field, Saval is always nearby. The head office and production facility are located in Breda.

### Optional back-panel configuration

The Saval surface mounted combination cabinet has a unique optional feature of a loose back panel arrangement. This back panel allows the complete fitting of the inlet pipework, or the hose reel itself, thus allowing the building/installation process to continue without the risk of damage. Once the building process is complete, the cabinet section can be attached to the back plate thus completing the installation, the advantage being that the cabinet is fitted after the building process thus reducing the possibility of damage.

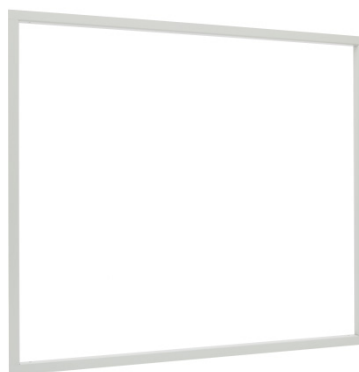

### Optional flush mounting frame

An optional flush mounting frame is available. This frame is manufactured from sheet steel and can be used to cover the seam between the edge of the wall recess and the cabinet wall to a maximum of 20 mm. When a flush mounting frame is used, the recess in the wall should be enlarged with approximately 10 mm (horizontal and vertical).

### The "finishing touch"

The hose reel cabinet should blend perfectly with the interior of the building. As standard, the cabinets are finished in a light coloured primer and can be finished in the final colour after mounting in.

Alternatively, the finish colour can be applied during the manufacturing process which removes the need for painting operations to be performed after installation.

### Special cabinets and accessories

The Saval hose reel cabinets are also available in stainless steel, with a brushed or polished or painted finish. In the door we make openings for the benefit of a manual fire alarm. For these openings are individual caps available in three colors (red, white, and gray). The Saval reel cabinets are also available in stainless steel, primed, brushed or polished.

### More information? Please contact us!

We can imagine that you still have some questions about your own specific situation after reading this leaflet. Our colleagues from the export department will be pleased to help you by making a good choice for your kind of risk. Please call the fire protection specialists of Saval: We know.
