

# Functionality combined with aesthetics

**Hose reel cabinets should compliment and not detract from the interior finishes of a building. The hose reel cabinet should blend with the interior but at the same time offer complete accessibility in the event of a fire.**

## Advantages of Saval surface mounted hose reel cabinets

- Modern design with no external fittings
- Concealed hinge arrangement
- Door with 2 openings for the benefit of a manual fire alarm
- Left or right door opening
- Separate back panel arrangement
- Optional flush mounting frame
- Sheet steel construction with Zincor and primer finish for optimum corrosion protection during the building process.

## Construction

The Saval surface mounted hose reel cabinets are manufactured from 1,5 mm thick zinc-covered sheet steel, ensuring a rugged construction. After the cabinets are

welded, they are fitted with a light primer and come standard with RAL9010 (white) structure lacquer. The cabinets can be painted in any colour before or after mounting in place. The special concealed hinges can be used for both left- and right-hand opening options. The two magnet catches fitted in the corners of the cabinet hold the door perfectly in place.

## Optional back-panel configuration

The Saval surface mounted cabinet has a unique optional feature of a loose back panel arrangement. This back panel allows the complete fitting of the inlet pipework, or the hose reel itself, thus allowing the building/installation process to continue without the risk of damage. Once the

## We know fire. We know safety. We know you.

Since 1925 Saval is a well-known name in fire fighting. Saval is the only company in The Netherlands which produces the high quality range of extinguishers and hose reels itself. Therefore, Saval is always able to comply to the specific needs of their customers. With over 100 service employees in the field, Saval is always nearby. The head office and production facility are located in Breda.

building process is complete, the cabinet section can be attached to the back plate thus completing the installation, the advantage being that the cabinet is fitted after the building process thus reducing the possibility of damage.

#### Optional flush mounting frame

An optional flush mounting frame is available. This frame is manufactured from sheet steel and can be used to cover the seam between the edge of the wall recess and the cabinet wall to a maximum of 20 mm. When a flush mounting frame is used, the recess in the wall should be enlarged with approximately 10 mm (horizontal and vertical).

#### The "finishing touch"

The hose reel cabinet should blend perfectly with the interior of the building. As standard, the cabinets are finished in a light coloured primer and can be finished in the final colour after mounting in situ. Alternatively, the finish colour can be applied during the manufacturing process which removes the need for painting operations to be performed after installation.

#### Special cabinets and accessories

The Saval hose reel cabinets are also available in stainless steel, with a brushed or polished or painted finish. In the door we make openings for the benefit of a manual fire alarm. For these openings are individual caps available in three colors (red, white, and gray). The Saval reel cabinets are also available in stainless steel, primed, brushed or polished.

#### More information? Please contact us!

We can imagine that you still have some questions about your own specific situation after reading this leaflet. Our colleagues from the export department will be pleased to help you by making a good choice for your kind of risk. Please call the fire protection specialists of Saval: We know.
