The updated Mitylite™ 2AAA by Peli

Peli has improved one of its classic torches, **the Mitylite™ 2AAA.**

This flashlight that has been used worldwide in many different applications has now been improved with interesting features.

With 6.000 candlepower value, the new Mitylite™ 2AAA offers a more powerful and bright source of light than before (4.000 CP) with a burn time of two hours. The difference in lumens is also noticeable since now it is 7.5, nearly twice as it was before (3.8). These values are quite similar as the old Super Mitylite™, which has been now discontinued. So, by launching the Mitylite™ 2AAA we are offering similar quality and look as the old Super Mitylite™ for the same price of our classical Mitylite™. The Mitylite™ 2AAA is available in black, yellow, white, orange and blue. Approved under ATEX Category 3 (Zone 2) Certifications.

This flashlight can be attached to several helmets with holders (available at Peli). This means that the new Mitylite™ will be able to be used for professional applications, industrial, fire, police, as well as outdoor and general uses.

Another interesting feature of the renovated Mitylite™ is the fact that this will be again submersible up to 150 meters.

As always, the updated Mitylite™ is covered under the Unconditional Guarantee by Peli.
