## The JA-80D universal transmitter unit

The JA-80D is a universal transmitter with three terminals: **Tamper**, **In** and **Ground**. The status of the inputs is wirelessly reported to an Oasis control panel to which the JA-80D has been enrolled.

Typically some kind of wired detector can be wired to the terminals up to 3 metres away, or another device with a switched output that represents the status of the monitored phenomenon.

An example of a suitable device is the LD-63HS water-flood detector. On detecting unwanted water, the LD-63S changes its output state which triggers the connected JA-80D to wirelessly signal this to the control panel or other unit to which it has been enrolled.

An instant or delayed reaction can be set via internal DIP switches, as can whether the input is NO or NC.

A tamper sensor enables the reporting of any unauthorised entry into the device.

The lithium battery permits a typical battery lifetime of 3 years.

Contact our Export Dept for details, price and delivery.

## JA-63E now available

The new improved wired keypad for the JA-63 security system is now available.

It has a sleek, attractive design, a good ergonomic layout, but keeps the reliable functionality of the previous design.

Contact our Export Dept for details, price and delivery.

## Invitation to upcoming exhibitions

Jablotron warmly invites you to visit our stands at the following exhibitions:

**SECUREX 2008:** Poznan, Poland, 22.04.2008 - 25.04.2008
