

Fire Extinguishing Agent-ABC type Dry Chemical ABC dry powder ABC powder extinguishing agent

Various portable and fixed dry powder fire extinguishers may be charged with this extinguishing agent. The Ammonium Phosphate Dry Chemical agent is the most effective extinguishing agent for extinguishing fires involving flammable solids, flammable fluids, combustible gases and electric equipment. This agent can be used in combination with foam extinguishing agents. It exhibits superior effectiveness in extinguishing large-area fires and is widely used in fire protection and fire extinguishing in oilfields, oil depots, petroleum refineries, large chemical plants, chemical storerooms, ships, airports, mines, factories, restaurants, and hotels, as well as in forested areas.

Packaging, Transportation and Storage Requirements:

1. Packaging consists of a 25 kg sealed interior plastic bag which is protected with a tear-resistant, woven exterior bag. (The bag may be modified to meet user's needs).

2. Each plastic bag is hermetically sealed before leaving the factory. The product should be stored in a cool, dry, and ventilated environment. Store out of the elements, and transport the product in dry conditions. Exposure to humidity and damp environments will negatively affect its performance.
