

SPECIFICATION - Trelcover

Trelcover overgarment is a unique accessory which is designed to improve the safety - by minimising the risk of frostbite - for the hazardous team members when dealing with condensed gases at very low temperature, such as liquid ammonia. The Trelcover shall be worn outside the Trelchem chemical protective suit.

A full Trelcover set consists of jacket, trouser and gloves. The jacket overlaps the trousers to avoid any "separation" (when moving) between the jacket and trousers.

Jacket:

- Comes in three different designs to match the corresponding Trelchem suit design - type T, TE or VP1. Type TE and VP1 is fitted with visor and type T with an elasticated opening to fit around the face mask.
- For easy donning and doffing, the suit has a long "hidden" zipper placed under the sleeve on the side of the jacket.
- The front of the jacket has two openings for easy access to the inlet / regulating ventilation valve on the Trelchem suit. It also facilitates reading of the gauge on the SCBA (when carried outside the Trelchem suit).

Design:

Trousers:

- Expanded back to accommodate the SCBA and / or the hump on the Trelchem suit.
- Drawstring in the waist.

Suit material:	Light-weight silicone coated polyamide fabric which stays flexible down to at least -70°C (-94°F).
Seams:	Stitched seams
Gloves:	3-finger overgloves with lining.
Visor:	1 mm PVC visor. Note: Only on TE and VP1 designs.
Colour:	Bright red
Sizes:	Universal size
