

SCOTT'S NEW E-Z RADIOCOM® II

VOICE AMPLIFIER AND 2-WAY RADIO INTERFACE

Scott's new E-Z Radiocom II is designed to support clear, effective communications. The system features a facepiece-mounted voice amplifier for communications among firefighter teams working in the same general area, as well as an interface with a two-way radio for remote communications.

A flexible speaker boom delivers in-coming radio communications. Outgoing two-way radio communication from the SCBA user to remote locations is activated by simply pressing a gloved-hand friendly PTT switch. The system is available with connectors for most popular twoway radios.

One of the advantages of the system is the user's ability to employ the voice amplifier independently by simply disconnecting the quick-disconnect coupling between the voice amplifier and PTT console. The voice amplifier is powered by three AAA batteries.

The E-Z Radiocom II is suitable for use with either the AV-2000® or AV-3000® facepiece. Brackets to attach the system's voice amplifier must be ordered separately. (AV-2000 bracket, P/N 804636-01; AV-3000 bracket, P/N 805787-01.)
